SUMMARY

Software Engineer with around 4 years in multicloud infrastructure support (AWS, Azure) and observability (Grafana, Loki, Promtail, Prometheus) across 150+ production applications, transitioning into DevOps/SRE. Led resolution of 35+ P1/P2 incidents while maintaining 98% SLA compliance, and automated patch management/provisioning across 40+ servers using Python, Bash, and Ansible - cutting manual effort by up to 35%. Hands-on with Docker, Kubernetes, Amazon EKS, Helm, Terraform, AWS Lambda, AWS Secrets Manager, and DevSecOps CI/CD (Trivy, SonarQube, GitLeaks).

TOOLS & TECHNOLOGIES

- **Scripting Languages:** Python, Bash scripting for automation
- **DevOps & Cloud:** Docker, Kubernetes, Amazon EKS, Helm, Terraform, Ansible, Infrastructure as Code (IaC), GitOps, ArgoCD (App-of-Apps pattern), Envoy Gateway, Kubernetes Gateway API, cert-manager, Docker Hub, GitHub Actions (CI/CD), Jenkins, Linux, Amazon Web Services (AWS), Microsoft Azure
- **AWS Services:** Amazon EKS, AWS Lambda, AWS Secrets Manager
- **Monitoring & Observability:** Grafana, Prometheus, Loki, Promtail
- **Databases:** PostgreSQL, MySQL, MongoDB, Redis
- **Security & Code Quality:** Trivy (dependency/image scanning), SonarQube, GitLeaks (secret scanning), Checkstyle, Hadolint
- **IT Service Management:** ServiceNow, Incident/Problem/Change Management, IT Infrastructure Library (ITIL), SLA Compliance & Reporting, Active Directory, Ticket Escalation & Quality Assurance (QA)
- **Productivity:** Microsoft Office Suite (Outlook, Word, Excel, PowerPoint)

PROFESSIONAL EXPERIENCE

Software Engineer | LTIMindtree, Gurugram

Sep 2022 – Present

- Monitored 150+ production applications using Grafana and Prometheus dashboards for real time observability, proactively identifying and resolving performance and availability issues before end-user impact.
- Automated repetitive troubleshooting, health checks, and reporting workflows using Python and Bash scripting, cutting manual triage effort by an estimated 30% and standardizing incident response across the team.
- Automated instance configuration, OS level patch management, and firewall/CIDR-scoped access provisioning across 80+ AWS and Azure servers using Ansible playbooks - cutting manual configuration time by an estimated 35% and reducing environment-related incidents by an estimated 20% by resolving multi-region connectivity issues.
- Led resolution of 35+ P1/P2 escalated incidents, including a critical production printing outage - ran root cause analysis, restarted failed services, and partnered with the application vendor, driving recurrence to zero over 6 months.
- Managed 20-30+ ServiceNow tickets daily across a 24/7 global support model while owning configuration, license renewal, and version upgrade management for 150+ applications, maintaining 98% SLA compliance and audit-ready deployments.

PROJECTS

DevBoard - Operationalized a Three-Tier Node.js/Go Application (PostgreSQL)

- Containerized a 3-tier Node.js/Go application (frontend, backend, PostgreSQL) with Docker, cutting local environment setup from roughly 2 hours to under 10 minutes.
- Templated Kubernetes deployments using Helm charts and deployed via ArgoCD as the single source of truth, replacing manual kubectl apply with automated GitOps sync and drift detection/reconciliation.
- Integrated External Secrets Operator with AWS Secrets Manager to inject PostgreSQL credentials into Helm-templated manifests, eliminating hardcoded database secrets from the repo.
- Built a GitHub Actions CI/CD pipeline for automated build, test, and deployment, reducing release turnaround from a multi-step manual process to a single push-to-deploy trigger.

BankApp AI - End-to-End DevSecOps Platform on AWS EKS (Spring Boot 3 Banking Application)

- Forked and re-engineered a Spring Boot 3 (Java 21) banking application - transaction tracking (deposit/withdrawal) with an AI chatbot (Ollama running TinyLlama) for balance and transaction lookups - into a production-style DevSecOps platform.
- Provisioned an Amazon EKS cluster via Terraform with automated ArgoCD bootstrap, eliminating manual cluster setup and establishing GitOps as the deployment model from day one.
- Architected GitOps deployment using ArgoCD's App-of-Apps pattern across app, gateway, and monitoring layers, enabling self-healing deployments that auto-reconcile from Git.
- Deployed Envoy Gateway (Kubernetes Gateway API) as ingress with automated HTTPS via DuckDNS + cert-manager, removing manual TLS certificate management, and built a security-gated GitHub Actions CI/CD pipeline (Checkstyle, GitLeaks, Trivy dependency/image scanning).
- Automated the full release path - image build → Docker Hub push → GitOps manifest update → ArgoCD sync - with zero manual kubectl.
- Implemented AWS Secrets Manager + Lambda for automated MySQL credential rotation, and wrote Ansible playbooks to bootstrap a fresh jump server in a single run.
- Instrumented full-stack observability with Prometheus + Grafana dashboards across the application, gateway, and cluster layers.

EDUCATION

Bachelor of Computer Application — Techno India University, Kolkata

2019 – 2022
